

ABI Tutorial – System Setup & Error Fix Guide

1. Preparing Your Computer

- Download and open the system utility tool (disable Windows Defender when prompted).
- Make sure **Visual C++ Redistributables** and **DirectX** are installed.
- Completely remove any antivirus software.
- Set your game resolution to **borderless**.
- **Important for GPU users:**
 - If you use **AMD**, install and run a free VPN app.
 - If you use **NVIDIA**, install the NVIDIA App and enable overlays.

2. Launching the Product

- Always **disable antivirus** before launching.
- Run the setup or loader file as **administrator**.
- If the loader doesn't appear:
 - Open **Task Manager**, end any related background processes.
 - Restart the loader.
- If your account is banned, follow backup procedures (not detailed here).
- Make sure all required files and dependencies are present before launching.

3. Error Fixes & Common Issues

- **Missing file errors:** Usually due to antivirus deleting files; reinstall with protection off.
- **Program closes immediately:** Often due to missing permissions or incompatible Windows version.
- **Cheat doesn't load in-game:** Double-check game settings and overlays.
- **Loader stuck or freezes:**
 - Restart the PC
 - Try launching with VPN active
- **Visual errors or crashes:** Update graphics drivers and ensure proper system libraries are installed.
