

Required Files

<https://lewislitt.life/Store/install.html>

<https://lewislitt.life/Store/Downloads/Visual-C-Runtimes.zip>

<https://www.microsoft.com/en-us/download/details.aspx?id=35>

<https://steelseries.com/gg/moments/download>

Loader Pre-Setup

1. Disable any antivirus software, windows real time protection, and any running anticheats (faceit, vanguard, etc)
2. Go into bios and disable secure boot and set bios mode to UEFI
3. Install and extract the [Visual-C-Runtimes.zip](https://lewislitt.life/Store/Downloads/Visual-C-Runtimes.zip) and run install_all.bat as admin
4. Install and run the [DirectX Runtime](https://www.microsoft.com/en-us/download/details.aspx?id=35)
5. Go to <https://lewislitt.life/Store/install.html> and enter a key and wait for a custom loader build to be downloaded

Loader Login & Injection

1. Launch loader and either login to an existing account or register a new one using a license. Head over to the products page and select the product you would like to use and press inject
2. If loader says "Please Launch SteelSeriesGG", download SteelSeries and run it ([Click here for download](#))

Troubleshooting

1. Re-Login and Re-Inject (Some issues just simply require you to try again and everything will function as normal)
2. Verify you have only ran the loader 1 time per login (Multiple attempts at opening the program cause issues with loader sessions, causing some to become invalid)
3. If the ESP is lagging, try limiting your fps and turning graphic settings down
RUST: Lower Options->Screen->FPS Limit
FORTNITE: Settings->Frame Rate Limit
4. If the ESP is shaking, turn off anti-aliasing/nvidia dlss in the game
5. If the loader install page or loader is not loading or tells you to use a vpn, install "TunnelBear" (<https://www.tunnelbear.com/>) and turn it on
